DETAILED ACTION

Claim 19 is objected to because of the following informalities: this claim is dependent on cancelled claim 15. Appropriate correction is required.

Applicant's Arguments

Applicant's arguments with respect to claim 10 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 103

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claim 10 is rejected under 35 U.S.C. 103(a) as being unpatentable over Gifford in view of Maslov et al. 6,812,661 B2. Gifford discloses multiple wire coil set solenoids with reciprocating magnetic objects 12a-12d with an energizing control system that variably controls the time duration for the energizing of the individual coil wire sets as described in column 2 lines 23-27 and column 5 lines 36-63 but does not disclose an energy control system that skips wire coil sets at selected times. Maslov et al. teaches in column 3 lines 8 ½ to 40 ½ that motors have different efficiencies at different speeds, based on the number or coils or wire turns in a coil. Since Maslov et al. and Gifford are from the same field of endeavor it would have been obvious at the time the invention was made for one of ordinary skill in the art to have varied the number of coils or turns in a coil in a reciprocating motor in order to increase the efficiency of the device.

Allowable Subject Matter

Claims 1-5, 7-9, 11-14 and 16-19 are allowed.

Art Unit: 2834

The following is a statement of reasons for the indication of allowable subject matter:

The prior art of record does not disclose or teach a solenoid based propulsion system where the magnetic object may be propelled out of a tube when at least one wire coil set is de-energized in combination with the other features of claims 1 and 14.
